

Chairman's report 2013

Thanks to the controlled tire the fun of driving is back. With last year's decision at the AGM to run a controlled tire we have seen some very close and exiting racing this year at the European Championships. A first year is always a little bit difficult, because those who do not like the system will try to find gaps everywhere but the 2 EC's for 1/8th and the 2 from the 1/10th class have proven that good racing is there without the need of tire treatment. Of course there are always things to improve but this first year has showed it works and it also shuts all those comments and suspicions between the drivers when we were still driving our own tires but without additives.

The EFRA Calendar for 1/8th had the following races for 2013:

April	26-28	GP Monteux/France
May	03-05	GP Lostallo/Switzerland
May	24-26	EC-B 1/8 th , Aigen-Scharl / Austria
July	12-13	EC flat Monteux / France
July	26-28	EC-A Halifax / England
September	6-8	GP Bologna / Italy
September	20-22	EC40+, La Turbie / Monaco
October	4-12 th	WC , Keitune / Ichihara / Japan

GP's 2013.

The GP's are suffering the last couple of years. Mainly due to the large number of races, both National, but also those organized by factories or brands. The use of tire treatment and the problems in detecting makes it difficult to get drivers unless you run a controlled tire.

GP Lostallo

This was the best visited GP race this year with drivers even coming from Russia.

GP Bologna

The GP in Bologna only attracted Italian drivers this year and that is a little bit funny, because normally a GP in the Nord of Italy is visited well by drivers from Germany, Switzerland and other countries.

Bologna is also the organizer of next year's EC-B.

EC-B, Aigen/Austria.

The Weather was a little bit difficult this year at the EC-B, the first race where we have used the controlled tire. During the weekend it was still ok, so as the first days of practice, but on Wednesday rain started to pass the track. However we managed to get a few dry rounds of Qualifying in on the controlled tires and the racing was very close. After a very exciting final it was Daniel Sieber from Germany who took the honors by finishing just in front of Nacho Lopez from Spain and Michael Klausner from Austria. The 3 drivers finished within 3 seconds. The majority of drivers felt very confident with the Matrix Controlled tire. Despite the weather a good organized event and my thanks to the club in Aigen who was the first to work on the controlled tire.

EC Classic at Monteux

An almost French event was the flat chassis EC in Monteux. Only a single Italian and Monagask driver were part of this flat chassis EC. One of the senior drivers of France , Serge Christiany, who already competed in the nineties' took the victory only with 4 seconds on Zugno.

EC-A, Halifax / England

Running an event in England is always a small gamble, but this time we were lucky. Weather was good all week and the racing itself was again a very close battle. Once again the controlled tire showed that good and fast racing is possible. It was exciting in Qualifying till the last round, where at the end Mark Green took the pole. In the Final it was in the beginning a battle between Green, Branson and Groskamp. Green dropped a little bit at the end and the battle for victory was between Groskamp and Kyle Bransson. Groskamp took the title with a margin of only 0.77 of a second with Balestri half a lap down on third. So for Jilles this was his first big victory in an IC class, after several TQ's in the past. A very nice event at a very nice facility, updated before the event to make sure the standards were meet for this EFRA event. A well organized event thanks to BRCA and the local club.

EFRA EC-A, Halifax July 2013

Position	Name	Result	Avrg Lap	Nat #
1	Jilles Groskamp	175/45m 6.70	15.47	NED

EC40+, La Turbie / Monaco.

EC40+ in La Turbie attracted 27 drivers for 1/8th, 10 for the 1/10th class and 8 for the flat chassis. There was no controlled tire, so everybody had to behave himself. For the future we need to think about a controlled tire for this race, but with free inscription it is not easy to make a system that prevents the organizer for losing money on tires he cannot sell.

1/8th final result

WC, Keitune Speedway / Ichihara / Japan.

This IFMAR World Championship started with a lot of talking, rumors, accusing's and finally also with a lot of no-shows. However all those drivers that think they had a good reason to stay home they were wrong. First of all despite the Fukushima disaster Ichihara, where the event took place is a safe place to be. Secondly the Keitune facility is a nice track and 3rd the JMRCA made the event a very nice one, where everybody was treaded and helped when it was necessary.

Due to a lot of no-shows we finally had about 98 drivers at the starting line. This gave us a little bit room to change the time tables and to give everybody a fair change in some practice. The track is not easy so practice for all those coming from far was needed. Saturday started with rain, so that was one missing day, but for the rest of the week we were lucky to have good weather, despite the fact that a typhoon was expected to cross the track on Tuesday. Luckily the typhoon made up his mind and changed direction, so we escaped. Whoever planned that date for the event he must have some luck inside, because the week after another typhoon crossed Chiba and there was a lot of water, wind and mud slides for more than 3 days.

Of course the Japanese drivers had an advantage, but that's the same when we run in Lostallo, than the European drivers are in advantage. However also the European drivers did Ok. Jilles Groskamp was on the good pace could match with some of the Japanese Aces. But also Carmine Raiola and Adrien Bertin were in the top and Silvio Hächler made it all from the 1/8th to the final..

For all those drivers that missed Keitune for whatever reason, you have missed a good organized event, there was no signs at all from the "Fukushima " disaster, the food was good and at least a handful countries in Europe are more expensive than Japan. Perhaps some of you wanted more practice, but Silvio Hächler showed you can also make the main final with limited practice.

Finalrankinglist - WC

Controlled tires.

Finally I want to thank the tire suppliers from this year's events for their support and the quality of the tires. This first season with a controlled tire has shown that tire treatment is not needed and that competitive racing is possible. We have seen a number of new drivers in front, which is good for the sport. Special tires or tire treatment is difficult for the privateer, because they never will get the products that are offered to the semiprofessional drivers. By using the controlled tire there is a better chance for everybody to end high and the whole time consuming mystery of treatment can be left home.

The controlled tire will continue for the next season, although part of the work has to be done by the organizer. Hopefully we will see a growing number of drivers at the EC's in 2014 and for the future.

Ranking 2013 for 1/8th.

Here under you will find the ranking from the past season. The first 30 drivers are for sure A-drivers for next year and are excluded from the EC-B, together with drivers from other classes according to the rulebook and those that have compete in the final of the ECB this year.

With some Italian drivers missing in Japan we have a few new young SWISS drivers now on top of the ranking, who have the capabilities to become a champion in the next years.

Drivers Name	Lic.	EC2012	WC13	GP/F	GP/CH	GP/I	EC2013	Total	pos.

Noise testing.

Noise level testing will be a fact for 2014. The first year will be to show the drivers their level, without any punishment (providing there is nothing as regards modifications or a muffler that comes off), but from 2015 on we will start penalize drivers that are making too much noise. Slowly we will bring the level down every year little by little.

The system has proven itself already for 2 years in Large Scale and was also used in Lostallo during the World Championship. It is a combination of a dB meter connected to a loop with a program that registers every passing of a car.

All IC classes will use such a same system to check noise levels in the 2014 season

Sander de Graaf / EFRA
1:8 scale section chairman.
